

## Postdoctoral Researcher position

The cloud-modeling group at the Faculty of Physics, University of Warsaw invites applications for a full-time postdoctoral position. The post holder is expected to join our team for 24 months. The candidate should be ready to start not later than January 1, 2020. The net salary is approximately 6000 PLN (~ 1400 EUR) per month, competitive for the cost of living in Warsaw.

The successful candidate will join our Research Group **Microphysics of Clouds** and work on the project entitled **Turbulent dynamics and microphysics in a Stochastic Lagrangian Cloud Model**. The project investigates by numerical simulations the role of turbulence in the microphysical processes that shape the droplet spectrum in convective clouds. The Principal Investigator will work closely with the successful candidate in collaboration with partners from NCAR. Applicants should have a PhD in Physics, Mechanical Engineering, or a related field. The candidate must also possess a very good command of written and spoken English. Experience in numerical modeling of turbulent flows will be appreciated.

Applications including a detailed CV, brief statement of research interests, and the contact information of two references should be sent to [Sekretariat.IGF@fuw.edu.pl](mailto:Sekretariat.IGF@fuw.edu.pl). Questions should be addressed to prof Hanna Pawlowska ([hanna.pawlowska@igf.fuw.edu.pl](mailto:hanna.pawlowska@igf.fuw.edu.pl)). The application deadline is October 31, 2019.
